Bot Qualification Questionnaire

What is the purpose of this questionnaire?

To describe ONE specific bot you created. Pick ONE of your bot's and answer the following questions as they relate to the bot you selected. We are looking to create presentation specific to bots you have developed. Here, we are NOT looking for generalities about RPA and bots that people get when they look up RPA on Google. Instead we want to be different by outlining specific types of bots that will meet the needs of targeted customers.

Answer the following questions to qualify the potential your bot has in the market and determine if it is something we can use to create a presentation for prospective customers.

Fill out one of these forms for each bot you would like to have considered.

- 1. What does the bot you created do and what is its purpose?**
A Bot has been created to Create ad main Employee information in SAP and run the payroll
- 2. What is the main industry/domain the bot was created for?**
i.e. Human Resource
- 3. What departments within the industry use the bot?**
Pay roll and Administration Department

4. How would you describe the bot?

BoT will enter all employee information that has been recorded in paper to SAP Transaction CODE PA01. Apart from that BoT automates the Payroll processing for Weekly Salaried employees and BI-Weekly salaried employees. BoT helps in deducting the payroll according to wage types

Current process: Humans work on interpretation and decision making, but also on tasks related to collecting, copying, checking of data files et cetera.

Future process: Humans and robots work together. Robots take care of repetitive data related tasks. Humans are involved in more complex tasks such as interpretation and decision making.

5. What software and hardware does the bot interact with?

SAP and UiPath.

6. What is the measurable impact to a business that implements this bot?

Payroll Processing of employees are done without any manual interventions and timely processing .

There are a couple of pay models available, let us know which you prefer.

- We identify the process then lay it out as an offering and the developer gets a one-time payment for working on outlining the concept to share with prospective customers. In this case, we would just use the presentation as an example presentation for potential clients and use another developer for the projects when they come up.
- Similar to the first however instead of paying upfront for the project outline, we would offer the developer the chance to earn residual income from developing each job when it comes up. This will be based on a percentage of the agreement paid by the customer, the percentage will be paid to the developer through the term of that agreement. If the customer enters a 1 year agreement, developer gets paid a percentage of that agreement throughout its term.
